

Welcome ...

... to the CDEuM world, your competent centre for

computer • design • engineering & modelling.

In this short summary, we present our core competencies in the automotive sectors of conception, development, design, prototype construction and small series production with the main focus on plastics and mechatronics.

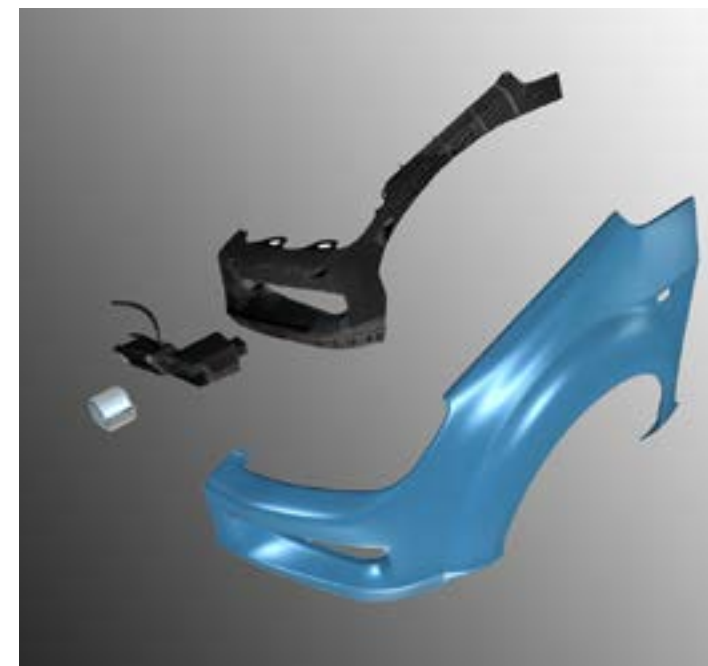

As an active full-service development partner CDEuM has more than 20 years of experience and a lot of successful projects with well-known automotive manufacturers.

Flexibility, innovation and customer oriented work are the basic pillars of CDEuM.

Continuous development and transparent project correspondence makes us your first choice constructive development partner.

Get to know us personally – we are looking forward to your enquiries.

project management and design support

conception and construction

pre-production parts and production calibration

low volume production
